

## AP Computer Science Principles Summer Assignment

Below is a list of different websites you will be using to complete your summer assignment. The websites are composed of a series of lessons for you to complete. Lessons are to be finished prior to our first week of classes in August.

Option 1: If you are a beginner to computer programming, begin with basic blocky coding, and complete the lessons with a choice of the following two different websites.

1. <https://blockly-games.appspot.com/?lang=en>.
2. <https://scratch.mit.edu/>

Option 2: If you have some computer programming background, go to [Codecademy.com](https://www.codecademy.com)

1. Pick one option from the “Courses” section, and complete one of the tasks. Introduction to JavaScript, ruby, or Php.

You are only required to choose one of the options listed above. Even though the lessons may vary, they each teach you fundamental computer programming concepts that are universal to all coding languages.

Please feel free to reach out if you have any questions.
